Executive Summary

This study of Delaware juvenile recidivism provides a comprehensive summary of re-arrest patterns when juvenile offenders are released back to the *street* after concluding a stay in a locked secure facility, a staff secure or a non-secure program. In many cases, a juvenile moves between programs before being released to the community. For instance, the typical Ferris School for Boys placement episode includes three contiguous placements: (1) admission to the Detention Center, (2) admission to the Ferris School, and (3) transition back to the community through Mowlds Cottage. In this case, time *at-risk* in the community does not start until the juvenile leaves Mowlds Cottage.

FY06 Juvenile Recidivism:

- Level V locked secure facility releases: 44 percent were re-arrested for a felony within one year (page 17.)
- Level IV staff secure programs releases: 38 percent were re-arrested for a felony within one year (page 23.)
- Level III non-secure program releases: 29 percent were re-arrested for a felony within one year (page 47.)

Long term juvenile recidivism rates have decreased over the past decade:

- Level V recidivism has decreased from 52 percent to 44 percent.
- Level IV recidivism had decreased from 51 percent to 38 percent.
- Level III recidivism has decreased from 45 percent to 29 percent.

The decrease in long-term juvenile recidivism rates is associated with the reorganization of the Division of Youth Rehabilitative Services (DYRS) incarceration, placement and treatment programs, which were implemented at the same time as the Dispositional Guidelines for Juveniles in the mid-1990s.

While short-term juvenile recidivism rates have improved significantly since the mid-1990s, long-term recidivism rates still remain an important issue. After two full years of being atrisk in the community up to 60 percent of juveniles released from DYRS programs have been re-arrested for a felony. Furthermore, four years after release from Ferris School, the main Level V juvenile facility, 60 percent of these offenders have been sentenced to an adult Level V facility (page 13.)

Intentionally Blank

Introduction

This study provides comprehensive recidivism rates for juvenile offenders released by the Department of Services for Children, Youth and Their Families (DSCYF), Division of Youth Rehabilitative Services (DYRS) between 1994 and 2006 from out-of-home secure residential placements and non-secure programs. There are two major levels of security related to out-of-home residential placements: secure and non-secure. Under Delaware's Dispositional Guidelines for Juveniles, youth can be sentenced to these different program levels as well as probation. The program levels reflect a graduated approach that requires increasingly intensive programming according to risk and need assessments of each juvenile. The more intensive programming corresponds to residential secure placements, the less intensive to non-secure placements:

- Level V, the most intensive programming available, is comprised of locked secure institutional settings like the Ferris School for Boys.
- Level IV staff secure programs provide 24 hour supervision and general diagnostic, substance abuse and sex offender treatment.
- Level III programs provide programming in non-secure settings.

Most of the programming is provided by contracted private organizations both in Delaware and out-of-state. Recidivism rates and detailed juvenile offender profiles are presented for 129 separate institutions, public and private residential programs, and Level III programs.

The main measure of recidivism used in this study is a felony re-arrest – not a re-conviction or a re-admission – following release from a placement. Re-arrest recidivism rates are reported for four different at-risk intervals: 6, 12, 18, and 24 months. Many juvenile recidivism studies report truncated results because they stop following juveniles once they reach the age of majority. This study does not truncate results because Delaware arrests can be tracked through an offender's adult years.

Juvenile justice policy makers established the use of the felony re-arrest rate as the main measure of recidivism for this series of studies in October of 1998. It was determined that the felony re-arrest rate tapped some of our most reliable data and that, furthermore, it provides the possibility for a *fairer* cross-jurisdictional comparison of recidivism rates. While the felony re-arrest rate is a viable measure of recidivism, it is preferable to measure recidivism using multiple measures. Where re-arrest highlights public safety risks to the community, redetention underscores the court's willingness to remove a juvenile arrestee from the community, at least temporarily, and re-incarceration would highlight the Family Court's affirmation of guilt for a new crime.

¹ Due to the use of the latest available placement data for each edition of this report, the release counts, felony recidivism rates, and historical profiles presented in this document are not comparable to information presented in previous reports. See page 63 for a detailed explanation of how the dataset was constructed for this study.

As a means of providing a fuller understanding of juvenile criminal behavior and recidivism two additional views of recidivism are provided in the introductory part this study. In addition to the *main* felony re-arrest measure, the full view of all re-arrests (by type of arrest) is examined for FY06. Second, the FY95 to FY06 felony plus the misdemeanor re-arrest pattern is examined.

FY06 Recidivism Summary

Juveniles were tracked for at least 12 months after their release from 5,653 Level V placement episodes that occurred between FY95 and FY06². Between FY97 (the State's fiscal year runs from July to June) and FY06 (the last year that a full cohort of releases could be studied for being at-risk for 12 months,) the recidivism rate decreased from 52 percent for youth released during FY97 to 44 percent for those released in FY06 – a 15 percent decrease in felony rearrest recidivism. The average length of stay in a Level V secure setting increased between FY97 and FY99 from 3.8 to 4.5 months. Since then, the Level V average length of stay decreased to 3.6 months. See page 17 for more details on Level V recidivism rates.

Juveniles were tracked for at least 12 months after their release from 5,432 Level IV placement episodes. Excluding an increase in the recidivism rate between FY95 and FY96, the recidivism rate decreased from 51 percent in FY97 to 38 percent in FY06 – a 25 percent decrease in felony re-arrest recidivism. The average length of stay in a Level IV secure setting decreased during this time period from 6.7 to 2.8 months. See page 23 for more details on Level IV recidivism rates.

Juveniles were tracked for at least 12 months after their release from 7,492 Level III placement episodes. Excluding an increase in the recidivism rate between FY97 and FY98, the recidivism rate has decreased from 36 percent in FY99 to 29 percent in FY06 – a 19 percent reduction in felony re-arrest recidivism. The average length of stay in a Level III non-secure setting decreased from 7.6 months in FY97 to 2.5 months in FY06. See page 47 for more details on Level III recidivism rates.

The tables below – Tables 1, 2, 3 – provide the FY06 felony re-arrest and summary by individual program within each level of sanction. Recidivism is reported at one year at-risk after release from the secure placement episode. These recidivism results are the most recent available because a full year must pass before recidivism statistics can be calculated for a cohort.

² See the explanations of placement episodes on pages 14 and 62 of this document.

FY06 12 Month Recidivism Rates

The Level V FY06 release cohort recidivism rate at 12 months at-risk for a felony arrest is 44 percent. The following table shows the FY06 12 month recidivism rate for Level V programs.

Table 1, Youth Arrested for a Felony within 12 Months of Release from a Level V Episode, FY06 Releases

Program	No. Released	No. Arrested	Recidivism Rate
New Castle County Detention Center, DE	245	111	46%
Stevenson House Detention Center, DE	158	55	35%
The Ferris School for Boys, DE	148	78	53%
C.C.A., South West Indiana Youth Village, Drug and Alcohol, IN	7	1	14%
Level V Episodes ³	499 ⁴	217	44%

 $^{^3}$ There were 499 releases during FY06 from Level V episodes. However, three juveniles died within twelve months of their release from a Level V episode. The recidivism rates presented in this analysis are based on the number of juveniles alive at the end of each at-risk period.

⁴ Please note that secure placement episode statistics within a level are not additive. Double counting would occur if an attempt was made to sum to a Level V total because a Level V episode may include admissions to more than one Level V program.

The Level IV FY06 release cohort recidivism rate for a felony arrest is 38 percent. The following table shows the FY06 12 month recidivism rate for Level IV programs.

Table 2, Youth Arrested for a Felony within 12 Months of Release from a Level IV Episode, FY06 Releases

Interpreting Recidivism Results: A Caution

Interpretations of the recidivism results in this study can be made for general types of programs like Level V or Level IV and for a specific program over time. Caution, however, should be exercised when comparing a specific program with another. It might be assumed that all Level IV programs are similar and therefore comparable in terms of recidivism. Whereas this may be true for some programs, it may not be for others. For instance, a Level IV shelter where juveniles are held for two or three weeks awaiting placement is not the same as a one year, or even a three month Level IV program, that provides extensive counseling. Juvenile programs also differ significantly in the type of offender they are willing to serve: not all programs are geared toward providing services to youth with multiple unsuccessful prior placements, some prefer instead to service offenders without prior placements.

It is also important to realize that youth with more extensive criminal histories are more likely to have higher recidivism rates. Prior criminal history patterns differ significantly from program to program and even from year to year within a program. Fortunately, this study provides length of stay and prior criminal history summaries for each program. The historical profiles provided in this report should be helpful in framing discussions regarding juvenile recidivism.

Different Measures of Recidivism

Measuring recidivism as a re-arrest or a re-admission is an important research and policy issue. It is preferable to measure recidivism using multiple measures where re-arrest highlights public safety risks to the community, re-detention underscores the court's willingness to remove a juvenile arrestee from the community, at least temporarily, and reincarceration highlights the Family Court's affirmation of guilt for a new crime.

This study, at the request of policy makers in October 1998, assesses DYRS recidivism in terms of felony re-arrest. This, it is believed, provides the possibility for a *fairer* cross jurisdictional comparison of recidivism rates. Re-detention information, although not used as an explicit recidivism measure, is reported as a part of the *offender profile* in this study. That is, the reader can compare the relationship between the average number of prior detention episodes for a specific release cohort and that cohort's felony re-arrest rate. No information is provided in this report regarding re-conviction because the data systems are not systematically capable of providing this information. While the major purpose of this report is to provide felony re-arrest recidivism rates for the 18,009 release events between July 1994 and June 2006 from DYRS Level III, Level IV and Level V programs and institutions, rearrest information is also collected for misdemeanors and technical or administrative measures. This more extensive arrest information provides valuable background information regarding juvenile crime patterns after release from DYRS programs and institutions.

Total Re-arrest Patterns

The pie charts below show FY06 re-arrest recidivism rates for released juveniles at-risk at least 12 months. Three different types of recidivism are displayed in each of these graphs: (1) Recidivism where a felony arrest constitutes the most serious criminal activity after release, and (2) where a misdemeanor arrest constitutes the most serious criminal event, and (3) violation of probation (VOP) arrests.

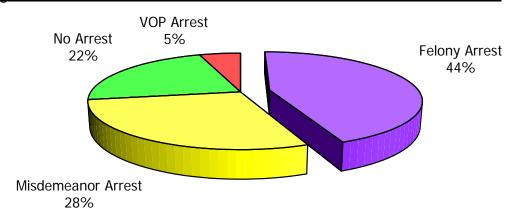

Figure 1, Level V FY06 Re-arrest Recidivism 1 Year After Release, n=499

Figure 1 shows the recidivism patterns for the 499 FY06 releases from Level V placement episodes after one year at-risk. Seventy-seven percent of the Level V releasees were rearrested within one year. Forty-four percent had felony re-arrests, 28 percent had re-arrests where a misdemeanor was the most serious charge, and another five percent were re-arrested only for violations of probation.

Figure 2 shows the recidivism patterns for the 592 FY06 releases from a Level IV placement episode. Seventy-five percent of the Level IV releasees were re-arrested within one year. Thirty-eight percent had felony re-arrests, 32 percent had re-arrests where a misdemeanor was the most serious charge, and another five percent were re-arrested only for violations of probation. When the full range of re-arrest recidivism is considered, there is very little difference whether a juvenile was released from a Level IV or V program.

Figure 3 shows the recidivism patterns for the 1,394 FY06 releases from a Level III placement episode. Seventy-one percent of the Level III releasees were re-arrested within one year. Twenty-nine percent had felony re-arrests, 35 percent had re-arrests where a misdemeanor was the most serious charge, and another seven percent were re-arrested only for violations of probation. Level III releases were just as likely to be re-arrested in the year following release from a program, but they were also less likely to be re-arrested for a felony.

Figure 2, Level IV FY06 Re-arrest Recidivism 1 Year After Release, n=592

35%

Figure 3, Level III FY06 Re-arrest Recidivism 1 Year After Release, n=1,394

Comparing Misdemeanor Plus Felony and Felony Only Recidivism Rates

Another perspective on recidivism is arrests for new crimes only. Proponents of this perspective exclude arrests for violations of probation. Many violations of probation arrests are closely associated with intensive supervision programs where juveniles are arrested, not for breaking the law, but for violating the conditions of their sentencing orders, including failing to fully comply with the conditions of the intensive supervision program.

In some situations, violations of probation, when added to the recidivism for new crimes can make an intensive supervision program appear more punitive than it was designed to be. For example, the Serious Juvenile Offender program had 38 percent more technical arrests than a similar group of delinquents that where not part of the program.⁵ Although some may view an arrest for a violation of probation as less serious than an arrest for a new crime, an arrest for a technical violation is just as likely to result in a re-incarceration as a felony arrest (70 percent versus 71 percent) and much *more* likely to result in a re-incarceration than a misdemeanor arrest (70 percent versus 48 percent.)⁶ Therefore, while conceptually not as serious as a new crime, the impact of a technical violation arrest is just as significant as a new felony arrest.

Table 4, *Delaware 12 Month Juvenile Recidivism Rates*, shows that the reduction in felony rearrest recidivism was the same for Level IV and Level IV programs. Between FY96 and FY06, the 12 month Level V felony re-arrest recidivism rate decreased from 60 percent to 44 percent: a 16 percentage point decrease. During the same time period, the 12 month Level IV felony re-arrest recidivism rate, decreased 16 percentage points – from 54 percent to 38 percent. The decrease in felony and misdemeanor recidivism is similar over time to the reduction in felony re-arrest recidivism. Between FY96 and FY06, the reduction in felony and misdemeanor re-arrests was eight percentage points for Level IV and Level IV. It is interesting to note that even though the Delaware juvenile justice system implemented graduated sanctions in the mid-1990s, there has been a more significant decrease in felony re-arrests (16 percentage points) than for the combination of misdemeanor plus felony re-arrests (eight percentage points.)

⁵ <u>Delaware's Serious Juvenile Offender Program</u>, SAC, August 2004, p. 24.

Note: Analysis excludes arrests for municipal ordinances, non-DUI related traffic offenses and technical violations.

Re-admission Recidivism

Policy makers decided, in October 1998, that Delaware should assess DYRS recidivism in terms of felony re-arrests. Measuring recidivism in terms of re-arrests allows us to know what the propensity to be arrested for new crimes is and to track repeat criminality over time. Re-arrest recidivism gives the reader a sense of the degree to which DYRS can increase public safety. The expectation is that the programming offered by DYRS to juvenile offenders will decrease their propensity to commit future crimes and thus re-admission to juvenile or adult facilities. This study reports on juvenile re-detention and re-incarceration information so that readers can assess the relationship between prior detentions or incarcerations and felony re-arrest rates.

Another measure of the relationship between programming and increased public safety is the re-admission of offenders released from DYRS programs to juvenile or adult facilities. This measure of recidivism represents a first step in answering the question: How do our juveniles do after they leave the juvenile justice system? Do they continue to phase-out of the criminal justice system, as the DYRS downward trend in long term felony recidivism rates would indicate? Or, do they become the first wave of new admissions to the Department of Correction (DOC.) This report explores these questions for juveniles who have been released from a Ferris School for Boys placement episode. These are not typical juveniles, as the Ferris School for Boys recidivism chart on page 18 shows, these juveniles have, on average, already been detained 3.5 times, admitted to juvenile incarceration 2.5 times and have 8.8 prior arrests.

The 12 month FY02 Ferris School rate for re-admissions to a juvenile and/or an adult detention, Level IV or Level V placement is 72 percent. The total recidivism rate or *re-admission to YRS/DOC SD*, *LIV*, *LV* rate counts an offender recidivating to both a YRS and a DOC setting only once. Thus, the 12 month total re-admission rate of 72 percent is lower than adding the 12 month DYRS (51 percent) and DOC (45 percent) re-admission rates.

As time passes juvenile offenders reach the age of majority and age-out of the juvenile system. The most recent release cohort where all Ferris School offenders had reached the age of majority at the end of this study's follow-up period is the FY02 Ferris School release cohort. At release, members of the FY02 Ferris School cohort ranged from 14.8 years to 22.6 years of age. Obviously, those who were under 18 years of age at release were released from the Ferris School to the community. However, two Superior Court cases were transferred to DOC after their Ferris School stay and were then released from a DOC facility to the community. Thus, analysis of the FY02 Ferris School cohort can answer this critical policy question: How many juvenile offenders move to the adult system? One-hundred two of the 123 offenders in the FY02 Ferris School cohort⁷ moved to the adult system as either pre-trial detainees or sentenced Level IV or V Superior Court offenders, for an overall DOC re-

 $^{^{7}}$ A total of 126 releases occurred during FY02 from Ferris School placement episodes. However, three juveniles died within 24 months of their release from a Level V episode.

admission rate of 83 percent. The FY02 Ferris School DOC re-admission rate is similar to the overall DOC re-admission rate for the FY97 Level V release cohort, which was 87 percent.⁸

Table 5 provides detailed re-admission summaries for the FY02 Ferris School release cohort. Keeping in mind that the FY02 release cohort is the most recent group of releases that lets us see the full impact of serious juvenile offenders moving from the juvenile to the adult system, one can see that by the two year at-risk threshold, 54 percent of the juveniles released from a Ferris School placement episode were re-admitted to a DYRS detention, Level IV or Level V program. After the second year at-risk, the DYRS component of re-admission recidivism changes slightly because all the juveniles in this cohort have reached the age of majority by the third year at-risk. And, as may be expected, as they reach the age of majority the adult re-admission rate continues to increase. Four years after their release, the FY02 Ferris School release cohort reaches a DOC re-admission recidivism rate of 82 percent.

It is very important when examining Table 5 to realize that an offender recidivating to both a YRS and a DOC setting is only counted once for the total recidivism rate or *re-admission to YRS/DOC SD, LIV, LV*. Thus, where the total four year re-admission rate for the FY02 cohort is 89 percent, offenders who had been re-admitted to a YRS facility before they reached the age of majority, and were subsequently admitted to DOC, are *not* counted twice.

Table 5, A Comparison of DYRS and DOC Re-admission Rates

⁸ Delaware Juvenile Recidivism, SAC, May 2005, p. 10.

⁹ SD: secure detention; L IV: quasi-incarceration, e.g., staff secure DYRS program or a DOC L IV held at L V; L V: a locked correctional facility.

Technical Note: Measuring Recidivism

The FY07 Budget Act, 75 Del. Laws c. 350 § 78, authorizes the Delaware Statistical Analysis Center (SAC) with preparing this report. Juvenile justice policy makers requested in October 1998 that SAC assess DYRS recidivism in terms of felony re-arrests. Thus, in this study recidivism is defined as a new felony arrest in Delaware. Recidivism is measured when a youth is arrested for a felony in Delaware after being released from a DYRS Level III, IV or V placement episode. Recidivism is reported as the percentage of persons released who are re-arrested following release. Arrests for technical violations, misdemeanors, or traffic offenses not related to driving under the influence or motor vehicle theft are not included in the remainder of this study.

Traditionally, recidivism is measured from the date of release from an institution or a residential placement. This measure is valid for systems that take youth from the street, incarcerate them, and then release them back to the street. Delaware's juvenile system is much more likely to place the juvenile offender in a series of secure placements before a youth is released to the community. The methodology in this report captures the serial institutionalization of a juvenile as a *secure placement episode*.

Secure placement episodes comprise an uninterrupted period of time when a youth is not in the community and may include multiple releases from secure residential placements. For example, the typical Ferris School for Boys placement episode includes three contiguous placements: (1) admission to the Detention Center, (2) admission to the Ferris School, and (3) transition back to the community through Mowlds Cottage. The at-risk period for the juvenile who had a typical Ferris School for Boys placement episode does not start until the juvenile has been released from Mowlds Cottage and is no longer in secure supervision. In this study, the post-release *at-risk* period starts when a juvenile is released to the community.

Level V, IV, and III Felony Recidivism Tables

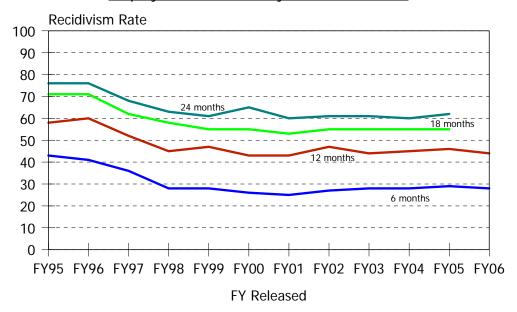

The following pages show felony recidivism rates for total Level V, IV, and III and selected programs in the study.

Recidivism rate tables and graphs are shown for programs that released more than 9 juveniles during fiscal years 2004, 2005 or 2006. Only recidivism rate tables are shown for small programs – programs that released less than 10 juveniles in FY04, FY05, and FY06.

Felony recidivism rates are presented in the following pages for four release thresholds: six, 12, 18, and 24 months since release. As the last releases for FY05 occurred during June, 2005, all youth in the FY05 cohort had been released at least 24 months. All youth in the FY06 cohort had been released for at least 12 months on August 12, 2007.

YMCA's Weekly program provides emergency housing – with no additional services – for adjudicated males 18 years of age who are in need of immediate and temporary housing.

Data Sources

Criminal Justice Information System Data

Arrest data was downloaded from the Criminal Justice Information System (CJIS) on August 12, 2007, for use in this study. Before the arrest data could be analyzed, extensive cleanup and charge selection was required according to the following protocol:

- a. Complete criminal history information was downloaded from CJIS at the charge level for all youth released from a residential Level IV or V program from July 1, 1994 through June 30, 2006.
- b. Charges from arresting jurisdictions other than "DE" were excluded, thus deleting charges under municipal ordinances.
- c. Charges for Title 21 offenses not related to driving under the influence or the theft of a motor vehicle were excluded.
- d. Offense Title, Section, Class, and Type citations were verified against the SAC's law file. Where CJIS statute citations did not match the law file, the citations were corrected. The SAC's law file matches current state statutes. For example, an offender's arrest for burglary in the third degree, a class F felony, appeared in CJIS as an unclassified misdemeanor.
- e. Attempted offenses charged under 11 Del.C. § 531 were corrected to the actual statute violated where an appropriate match could be made against the attempted offense's literal description. For example, 11 Del.C. § 531, attempted theft over \$1,000, was recoded as an arrest for 11 Del.C. § 841, theft over \$1,000 attempted.
- f. Attempted offenses charged under 11 Del.C. § 531 where the literal description did not reference an actual offense (Attempted attempt to commit a crime) and the NCIC code was not missing, were recoded to the actual statutes using the NCIC code.
- g. Attempted offenses charged under 11 Del.C. § 531 where the literal description did not reference an actual offense (Attempted attempt to commit a crime) and the NCIC code was missing, were recoded to actual statutes through the descriptive information contained in CJIS under the offense's complaint number.
- h. Attempted offenses charged under 11 Del.C. § 531 where the literal description did not reference an actual offense, the NCIC code was missing and the complaint information did not yield any clues as to the crime committed were resolved within the context of the offender's arrest patterns and criminal career.
- i. Criminal charges for individual offenders were aggregated at the arrest level, thus providing a collection of all relevant charges by offender and date of arrest, i.e., charges were aggregated into arrest events by date of arrest and SBI number.

Incorrect statute citations on 19,918 charges, or 9.6 percent, were changed to match the SAC law file.

Juvenile Placement Data

Release cohort data was extracted from the data maintained on the DSCYF's Family and Child Tracking System (FACTS), and the SAC's DYRS facility database, for youth released from placements from July 1, 1994, through June 30, 2006. Release cohort data was conflated according to the following protocol:

- a. Division of Family Services (DFS), DCMH, and DYRS Level III, IV and V program data was extracted from FACTS on September 11, 2006. The DYRS placement information (program name, admission and release dates) was verified against DSCYF fiscal records. If the fiscal records were not found, the placement information was verified through the program's records, when these were available.
- b. The program data were integrated with the SAC's juvenile facility database.
 - Excluded from the dataset were alternative placement records which coincided with a facility placement record, i.e., if a youth was serving time in Ferris but a bed was being saved in an alternative program, only the Ferris record was included in the dataset.
 - For cases where an alternative programs placement spanned over an admission into a secure facility, i.e., a youth was sent to the Stevenson House for a 72 hour administrative hold, the alternative program's placement information was adjusted to reflect the exit from the program and the entry into secure care.
 - For cases where an alternative program placement spanned over another alternative program placement, i.e. a youth's bed was being saved in a program while the youth was being held in a Level IV Snowden Cottage slot, admission and release dates were adjusted to correspond to fiscal records.
 - For cases where fiscal records showed that a youth was transferred, admitted, and/or released, but there was no corresponding record of the transfer in FACTS, a new record was created to reflect this movement.

A total of 3,483 placement records were found to be in error, an alternative residential program data error rate of 11.8 percent, due to discrepancies in admission and/or release dates when compared to fiscal records, missing records, duplication, and offender identification problems.

Secure Placement Episodes

Secure placement episodes comprise a continuous period of time when a youth is not in the community and may include multiple releases from secure residential placements. For example, the typical Ferris School for Boys placement episode includes three uninterrupted placements: (1) admission to the Detention Center, (2) admission to Ferris School, and (3) transition back to the community through Mowlds Cottage.

The release cohort data in this study includes releases (n=46,660) from non-secure Level III placements and secure or institutional out-of-home placements for the 7,416 juveniles released during the study period. Secure placements include DYRS detention and Level IV and Level V programs which house adjudicated youth in secure settings (n=29,704.) Secure placements also include DFS and DCMH programs that provide residential services which are classified by DSCYF as crisis bed, mental health; inpatient hospital; inpatient hospital, mental health; residential group care, treatment center; residential Interagency Collaborative Team; residential treatment, mental health; and residential treatment, substance abuse (n=2,986.)

From time-to-time a secure DYRS placement will be preceded or followed by a DFS or DCMH residential placement. Residential DFS and DCMH placements are included in this study for juveniles that had at least one active DYRS residential placement. Youth without DYRS residential placements are not a part of this study. DFS and DCMH placements are included in this study so that the time a juvenile spends in the community after being released from a secure residential placement episode can be calculated accurately.

Juveniles in Level III programs are in the community while they attend school, recreational activities, attend counseling sessions or receive vocational training. Some Level III programs provide home based services while others are classified by FACTS as being residential. FACTS' residential classification applies to Level III programs that provide group care, independent living, non-secure detention, and transitional services. These programs are not secure residential programs.

During the study period, 7,416 juveniles were released from 46,660 placements. These 46,660 placements can be grouped into 20,944 placement episodes.

Level III, IV and V Recidivism Study Dataset

The analysis file was produced by joining the latest available offender identification (SBI, and demographic information such as name, date of birth, race), arrest history (CJIS) and placement data (DYRS facility and contracted III, IV and V programs.) Since the analysis file used for calculating all the statistics in this report was conflated from the latest available information, the statistics presented in this document supersede statistics presented in previous reports. In total, 260,323 arrest charges were identified, verified and matched against 46,660 out-of-home placements to produce the analysis file.

No felony recidivism statistics are presented in this document for pre-trial juvenile detainees. The adjudicated Level V felony recidivism rates presented in this document for juveniles held in detention centers apply to juveniles who were adjudicated and subsequently admitted to a detention center or were held in a detention center for more than 10 days after their adjudication.

This analysis considers juveniles that spent at least one at least one day in the Ferris School before their transfer to Mowlds Cottage or release to the community as Ferris School releases.

Considered as Mowlds Cottage releases were juveniles who spent their entire incarceration at Mowlds Cottage before being released to the community.

DYRS/DOC Re-admission Recidivism Dataset

DOC release cohort data was extracted from CJIS, for juveniles that had been released from a DYRS Level V placement from July 1, 1994, through June 30, 2006. DOC release cohort data was conflated according to the following protocol:

- a. DOC detention, Level IV and V admission and release data was extracted from CJIS on January 23, 2007.
- c. DOC data were integrated with the SAC's juvenile placement data.
 - Excluded from the DYRS/DOC re-admission recidivism dataset were DOC records where an offender was in the community under supervised custody, direct supervision, pre-trial services, home confinement, assigned to a Probation and Parole institution or to restitution only.
 - When an offender had a Central Violation of Probation, Plummer House or Sussex Halfway House Work Release case, and the location file showed that during part of the case the offender had been in a *hard* institution, i.e., Women's Correctional or Delaware Correctional Institution, the location file admission and release data on the hard institution was included in the dataset.
 - Excluded from the dataset were Central Violation of Probation, Plummer House or Sussex Halfway House Work Release cases that were not related to a location file *hard* institution admission/release record.

The re-admission analysis file was produced by joining the latest available offender identification (SBI, and demographic information such as name, date of birth, race), DOC admission history (CJIS) and placement data (DYRS facility and contracted III, IV and V programs).

Appendix

Historical Recidivism Rates

The following appendix contains recidivism rates for programs that have not been active since FY02. The programs are grouped by dispositional level.
